CONTENTS

Volume 37, Issue Nos. 1–8 (2001)

International Journal for
NUMERICAL METHODS IN FLUIDS

Issue No. 1, 15 September

Dissipative mechanism in Godunov-type schemes: K. Xu and Z. Li 1

Numerical simulation of the vertical structure of discontinuous flows: G. S. Stelling and M. M. Busnelli 23

Boundary element analysis of driven cavity flow for low and moderate Reynolds numbers: M. Aydin and R. T. Fenner 45

Numerical solution of Navier-Stokes equations using multiquadric radial basis function networks: N. Mai-Duy and T. Tran-Cong 65

Fourth-order exponential finite difference methods for boundary value problems of convective diffusion type: A. C. R. Pillai 87

A multigrid approach for steady-state laminar viscous flows: S. J. Liao and F. Mashayek 107

Issue No. 2, 30 September

Numerical simulation of mold filling in injection molding using a three-dimensional finite volume approach: R.-Y. Chang and W.-H. Yang 125

Spectral analysis of flux vector splitting finite volume methods: T. K. Sengupta, D. Sridar, S. Sarkar and S. De 149

A general methodology for investigating flow instabilities in complex geometries: application to natural convection in enclosures: E. Gadoin, P. LeQuéré and O. Daube 175

Efficient construction of high-resolution TVD conservative schemes for equations with source terms: application to shallow water flows: J. Burguete and P. García-Navarro 209

Issue No. 3, 15 October

Absorbing boundary condition on elliptic boundary for finite element analysis of water wave diffraction by large elongated bodies: S. K. Bhattacharyya, S. Sathyapal and C. P. Vendhan 249

Practical techniques for a three-dimensional FEM analysis of incompressible fluid flow contained with slip walls and a downstream tube bundle: Y. Eguchi 279

Large Eddy Simulation of Turbulent Flows by a Least-Squares Finite Element Method: X. Ding and T. H. Tsang 297

Theory and applications in stability of free-surface time-domain boundary element models: B. Buchmann 321

The discontinuous profile method for simulating two-phase flow in pipes using the single component approximation: V. Guinot 341

Response of plane viscous jet to entrance flow rate perturbation: M. A. Knani, T. Lili and H. C. Boisson 361

Issue No. 4, 30 October

A three-dimensional vortex particle-in-cell method for vortex motions in the vicinity of a wall: C. H. Liu 501

Numerical analysis of interfacial two-dimensional Stokes flow with discontinuous viscosity and variable surface tension: Z. Li and S. R. Lubkin 525

A Petrov–Galerkin finite element model for one-dimensional fully non-linear and weakly dispersive wave propagation: S.-B. Woo and P. L.-F. Liu 541

Solving free surface fluid flow problems by the minimal kinetic energy functional: J. K. Lonyangapuo, L. Elliott, D. B. Ingham and X. Wen 577

Numerical simulation of viscous flows with free surface around realistic hull forms with transom: T. Li, J. Matusiak and R. Lehtimaki 601

Issue No. 5, 15 November

A three-dimensional vortex particle-in-cell method for vortex motions in the vicinity of a wall: C. H. Liu 501

Numerical analysis of interfacial two-dimensional Stokes flow with discontinuous viscosity and variable surface tension: Z. Li and S. R. Lubkin 525

A Petrov–Galerkin finite element model for one-dimensional fully non-linear and weakly dispersive wave propagation: S.-B. Woo and P. L.-F. Liu 541

Solving free surface fluid flow problems by the minimal kinetic energy functional: J. K. Lonyangapuo, L. Elliott, D. B. Ingham and X. Wen 577

Numerical simulation of viscous flows with free surface around realistic hull forms with transom: T. Li, J. Matusiak and R. Lehtimaki 601

Issue No. 6, 30 November

A domain decomposition approach to finite volume solutions of the Euler equations on unstructured triangular meshes: V. Dolean and S. Lanteri 625

Numerical simulation of high-Reynolds number flow around circular cylinders by three-step FEM–BEM model: D. L. Young, J. L. Huang and T. I. Eldho 657

The shallow flow equations solved on adaptive quadtree grids: A. G. L. Borthwick, S. Cruz León and J. Józsa 691

Comparisons of numerical methods with respect to convectively dominated problems: Y. Wang and K. Hutter 721

Issue No. 7, 15 December

GENSMAC3D: A numerical method for solving unsteady three-dimensional free surface flows: M. F. Tomé, A. C. Filho, J. A. Cuminato, N. Mangiavacchi and S. McKee 747

High-order filtering for control volume flow simulation: G. De Stefano, F. M. Denaro and G. Riccardi 797

A comparison of boundary element and finite element methods for modeling axisymmetric polymeric drop deformation: R. Hooper, M. Toose, C. W. Macosko and J. J. Derby 837

Issue No. 8, 30 December

A new stable space-time formulation for two-dimensional and three-dimensional incompressible viscous flow: D. N'dri, A. Garon and A. Fortin 865

Higher-order finite element discretizations in a benchmark problem for incompressible flows: V. Johns and G. Matthies 885

Numerical simulation of the unsteady flow over an elliptic cylinder at different orientations: H. M. Badr, S. C. R. Dennis and S. Kocabiyik 905

The composite finite volume method on unstructured meshes for the two-dimensional shallow water equations: W. Jiwen and L. Ruxun 933

Footbridges between finite volumes and finite elements with applications to CFD: F. Pascal and J.-M. Ghidaglia 951
